

VAX FAX

PHASE 1

Healthcare workers receive the vaccine first. If they get sick, there is nobody to care for the rest of us.

Phase 2

- + Essential workers (police, teachers, municipal workers, security people, farmers and food shop workers)
- + People over 60 years old
- + People who live and work in densely-populated places, such as prisons, old age homes, universities and churches
- + People over 18 with comorbidities (TB, HIV, poorly-controlled diabetes and other diseases)

PHASE 3

The rest of the country

When will vaccinations begin?

As soon as the government has tested the vaccines and confirmed that they work well.

South Africa is still investigating whether or not the AstraZeneca vaccine will properly prevent mild to moderate COVID-19 cases before they begin the roll-out programme.

What's the cost?

R20.6-billion for the 67% targeted coverage by the end of 2021.

R30-billion for 100% of the population.
